2 INDIGENOUS KENYAN CRAFTS

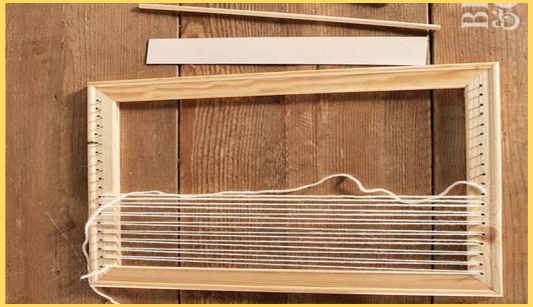

WEAVING

Developed by Charles Juma

PLAINANT AND TWINE TECHNIQUES

Weaving is done by passing threads over and under other threads on a **loom**. It is the process of **interlacing** warps and wefts.

A loom is a frame that holds **warp** threads tightly during the weaving process.

The two sets of threads used in weaving are the **warp** and **weft.** The wefts are the threads that **interlace** across the warp threads
